

Table Update Statements

1. Show the **INSERT** statements to add to the CustomerShip table two new customers with the following values:

CustNo	Name	ShipCity	Discount
906785	Humble Bagel	Oakridge	0.010
907744	New Frontier Market	Pendleton	0.0

2. Show the **UPDATE** statement to reduce all customers' discounts to half of their current rate.
3. Show the **UPDATE** statement to change the name of the customer Alpine Inc. to *Rocky Mountain Sports Inc.*

Hint: As a general solution, be sure to consider the unlikely, but possible, case in which two customers might have the same name.

4. Show the **DELETE** statement to delete all customers with a 0 discount.
5. Show the **UPDATE** statement to assign the customer whose CustNo is 275978 a discount that is equal to the average of all discounts for all customers.
